FOR IMMEDIATE RELEASE

MacKenzie Scott $15m gift to VisionSpring will help unlock $1 billion in income for agricultural workers and artisans

- VisionSpring is launching a $70 million initiative, Livelihoods in Focus, to correct the vision of more than 6 million people by 2030.
- The initiative will focus on low-income tea, coffee, cocoa and artisan workers in India, Bangladesh, Ghana, Kenya and Uganda.
- Correcting vision and providing eyeglasses in targeted communities will improve workers’ income and well-being, unlocking over $1 billion in new earning potential.

October 13th, 2022, New York - On this World Sight Day, as the global community focuses its attention on the 1 billion people who still do not have the eyeglasses they need to see clearly, VisionSpring announces a transformative $15 million gift from MacKenzie Scott. The gift catalyzes the launch of VisionSpring’s strategic initiative Livelihoods in Focus – a $70 million effort that will create more than $1 billion of new income among tea, coffee, cocoa and artisan workers by 2030.

"The gift from Ms. Scott is an incredible acknowledgement of the power of a simple pair of eyeglasses to unlock earning, learning, safety and wellbeing for people vulnerable to poverty.,” said CEO of VisionSpring Ella Gudwin. "And, with this powerful endorsement of our work, we are embarking on a multi-year journey to put Livelihoods in Focus, addressing the massive vision care gap among agricultural and artisan workers in South Asia and Sub-Saharan Africa. We need many more philanthropic investors, along with governments, companies and NGOs to join in bringing the wonder of clear vision to everyone,” she added.

Livelihoods in Focus builds on VisionSpring’s 20 years of experience and robust evidence gathered in the tea-growing region of Assam, India. A rigorous randomised controlled trial there found that a simple pair of eyeglasses lifts productivity by 22-32% among workers. When the economic benefits seen in Assam are extended to new farming and artisan regions with similar characteristics, scaling the effort has the potential to unlock more than $1 billion in new income earning potential for workers and their families.

Laura Hattendorf, Senior Advisor and former Head of Grants and Investments at Mulago Foundation, said: “Eyeglasses and VisionSpring’s approach yields the highest return on donor investment that we have seen across our portfolio. The income created per donor dollar is among the best - if not the best - we’ve ever seen.”
VisionSpring has targeted the tea, cocoa, coffee and artisan communities because the need for vision correction is acute and the work is vision intensive – especially at near distances for tasks such as hand pollination, picking tea, sorting and removing debris from harvests, intricate handcrafted work, and mobile banking.

VisionSpring routinely finds that 65-85% of workers acquiring eyeglasses through its vision access programs have never had their sight tested before and become first-time wearers of glasses. For workers the benefits of this 700-year-old technology are immediate. They gain improved productivity, income and well-being the moment glasses move from case to face. Research also shows that eyeglasses improve quality of life, reducing depression and anxiety, and increasing involvement in religious and family life.

MacKenzie Scott's gift is believed to be the largest, single private donation towards solving the problem of uncorrected blurry vision as a poverty intervention. Dr. Jordan Kassalow, founder of VisionSpring, said: “It is a big win for the sector as a whole and all of the organizations working on an issue that has been hiding in plain sight.”

-Ends-

About VisionSpring

Nearly a billion people could see clearly to earn, learn and be safe if they could acquire a pair of simple eyeglasses. VisionSpring is a pioneering, international social enterprise creating access to affordable eyewear, everywhere.

Founded in 2001, VisionSpring works to address the systemic dysfunction of an optical market which has failed to deliver access to affordable eyeglasses for consumers earning less than $4 per day. For many of these individuals, the lack of access to affordable eyeglasses leads to the loss of employment and educational opportunities and participation in a host of other activities.

We are filling the market gap by using innovative distribution strategies to sell radically affordable, durable, attractive eyeglasses. By employing innovative high-volume, low-margin business-to-business model coupled with philanthropic investments, we can deliver radically affordable eyeglasses to low-income individuals in emerging and frontier markets where they work, learn, and live.

To date, we have provided 8.7 million consumers with the corrective eyeglasses they need to sustain productivity, livelihoods, enhance learning outcomes and overall quality of life. As a result, a cumulative $1.8 billion in increased earning potential has been created at the household level.
